An audio webcast of the Company's presentation will be available by visiting the investor relations section of ZELTIQ's website at www.coolsculpting.com. A replay of the presentation will be available for 30 days.

About ZELTIQ Aesthetics

We are a medical technology company focused on developing and commercializing products utilizing our proprietary controlled-cooling technology platform. Our first commercial product, the CoolSculpting System, is designed to selectively reduce stubborn fat bulges that may not respond to diet or exercise. CoolSculpting is based on the scientific principle that fat cells are more sensitive to cold than the overlying skin and surrounding tissues. CoolSculpting utilizes our patented technology of precisely controlled cooling to reduce the temperature of fat cells in the treated area, which is intended to cause fat cell elimination through a natural biological process known as apoptosis, without causing scar tissue or damage to the skin, nerves, or surrounding tissues. We developed CoolSculpting to safely, noticeably, and measurably reduce the fat layer within a treated fat bulge without requiring the patient to diet or exercise.
